

DevOps Engineer

About the job

We are currently recruiting for a **DevOps Engineer** to work within the Digital team of a social enterprise, which offers services (social, digital etc) to local communities and SMEs, particularly those run by (or serving) the following groups:

1. Black ethnic minorities
2. Women
3. Young people (16-24 years old)
4. Migrant families
5. Groups suffering from digital exclusion

We are looking for a top-notch DevOps engineer to join our team. You'll play a key role in building and deploying features that will support both internal and external users of our digital services. We are looking for an individual who is passionate, hands-on and eager to learn. The role is likely to involve working on multiple exciting projects so the individual should be able to multitask.

Roles and responsibilities

- Release new product updates, ensuring a flawless user experience.
- Identifying and resolving any issues that arise in our production environment, keeping things running smoothly
- Build integrations and automated deployments that connect our systems and enhance the customer journey using tools such as GitlabCI and Docker

Tel: +44 115 784 7418
Email: mail@communityrevolution.co.uk

- Setting up multiple environments to help facilitate the agile development of new tools and services by our development team
- Contribute to project planning and participate in key project management decisions
- Craft and implement cutting-edge development tools and infrastructure to streamline our workflows
- Automate repetitive tasks to boost efficiency and improve the software release process
- Review and analyse code to ensure it meets our quality standards
- Troubleshoot technical problems and develop solutions to keep things running smoothly
- Deploy open source tools for use across the organisation (e.g. Wordpress, project management tools etc)
- Implement best practices to safeguard our systems from cyber threats.

Experience

A seasoned DevOps engineer with knowledge of Gitlab and Docker or someone with at least one (1) year of experience in software engineering.

Skills and competencies

- Automation
- Infrastructure management
- Monitoring and troubleshooting
- Coding and scripting
- Version control
- Security
- Soft skills
